Updated PRISM Requests Window

The following new fields/functions have been added to the Requests window.

1. **Submit a New Request** allows submission of a new single request directly from this window. There is also an option to submit a Request Set if applicable.

2. **Copy Single Request** allows a user to copy a request submitted in the last 35 days. Click this button and then click Find to see all of the available requests to copy. The default number of days to view is 7, but can be changed. Remember, this list is the reports available to the current responsibility in use. If applicable, there is also an option to copy a Request Set.

3. **Rerun Request** allows a user to rerun a report available in this view. Move the cursor to the report to rerun and then click the Rerun Request button. This opens the Submit Request window to submit the same request with the existing parameters, or optionally, update the parameters by clicking in the Parameters field.
